# POLICLAY<sup>PAVE</sup>

## The All Weather Clay Court System

Mixed on-site

Pavement layer

Can be paved over existing surface

Cut in permanent linemarkings

**POLICLAY<sup>pave</sup>** provides even slide behaviour and its excellent water permeability makes it possible for play shortly after rain, extending playing hours ensuring a higher utilisation with lower maintenance requirements.

**POLICLAY<sup>pave</sup>** is constructed on site consisting a base layer of recycled brick chippings, thickened and paved with the high performance binding agent and topped with finely crushed recycled brick tile. PVC line marking is permanently integrated into the surface layer promoting consistent playing characteristics all year round.

**POLICLAY<sup>pave</sup>** provides even slide behaviour and its excellent water permeability makes it possible for play shortly after rain, extending playing hours ensuring a higher utilisation with lower maintenance requirements.

# POLICLAY<sup>turf</sup>

## The Waterless Synthetic Clay System

**POLICLAY<sup>turf</sup>** is manufactured in-house, installed and infilled on site with select coloured sand designed to play and slide just like a natural clay court. Tufted-in line marking is permanently integrated into the turf layer promoting consistent playing characteristics all year round.

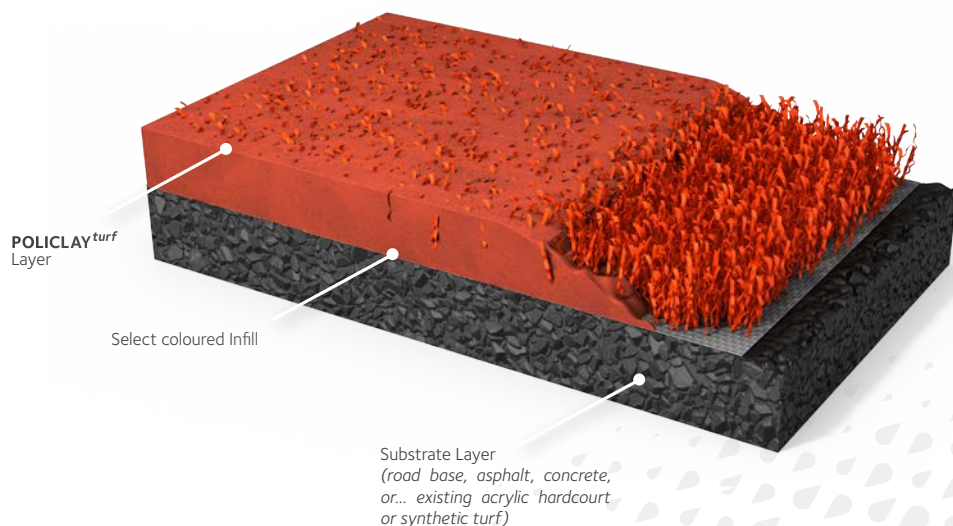

**POLICLAY<sup>turf</sup>** maintenance is minimal, as rolling and watering are eliminated and bagging is only required once a day instead of after every set.

### CARPET CONSTRUCTION

- High UV stability and proven yarn
- No potential for cracks
- Rapid drainage properties
- Environmentally friendly
- Quality assured manufacture to ISO 9001:2000

### REAL CLAY CHARACTERISTICS

- Surface speed comparable to natural clay
- Player slide characteristics comparable to natural clay
- Ball bounce comparable to natural clay
- Natural clay appearance
- Easy to clean and maintain

Adhesive troweled onto backing tapes

Base line taped and glued into place

Clay sand infill spread evenly via  
hoppers across courts

Infill groomed into surface

PAVE OR TURF

- \* **Water free**
- \* **Ultra fast drainage**
- \* **Low maintenance**

**POLICLAY** systems are an advancement in synthetic clay court technology by combining chemical and analytical research on natural clay court characteristics.

Speed of court, ball bounce, player slide and natural appearance have all been incorporated in the development which has produced both surface construction options;
